Stop Estimate

Name: STPFILAT.<REG> (EPS) and STP<MEAS>AT.<REG> (NON-EPS)

Level: Detail

Frequency: Monthly

The Stop Estimate file includes stops applied to estimates that are no longer active. This can result from several events, e.g., an estimator places a stock on a restricted list due to an underwriting relationship or the estimator no longer covers the company. Prior to June 1993, actual stop dates did not exist in the archive files used to create the Detail History. An algorithm was developed to determine the date when an estimate became invalid if, for example, a merger between companies occurred or an analyst stopped working for a firm, etc.

Estimate that are not updated or confirmed for a total of 210 days, the estimate is stopped.

Stopped Estimate contains a timestamp for the stop date.

Key	Item	Data Type	Format	Length	Start	End	Comments

G#7	Announce Stop Time	N	HH:MM:SS	8	32	39	

Adjustments (Split Factors)

Name: ADJFILD.<REG> (EPS, US), ADJFILI.<REG> (EPS, non-US),
ADJ<MEAS>.<REG> (Non-EPS, US and NON-US)

Level: Detail

Frequency: Monthly

The Adjustment's file includes corporation action factors (i.e., splits, dividends) used to adjust data historically. Clients who prefer to un-adjust per share estimate data can use factors included in this file. The split date is provided as an indicator of when the split was originally activated on the Refinitiv database. The archives used to create the Detail History are monthly slices of data, splits are effective as of the split date, which corresponds to
